

## **EUROBIKE 2014:**

### **REMA TIP TOP presents new bike wheel truing stand and other new products**

**Poing, 20.08.2014:** REMA TIP TOP is again represented this year at the international EUROBIKE bike fair in Friedrichshafen from August 27 through 30. This tradition-rich company will present its range of products to visitors on Stand 209 in Hall A5. Particular focus will be placed on the premium industrial-quality bike wheel truing stands, the bike ceiling lift and the bike tube no-wait repair range that combine all the advantages of self-adhesive and non-self-adhesive patches. In addition, REMA TIP TOP will show other highlights from its high-quality bike care and repair product range.

Massively constructed in steel and high tensile strength aluminum, the new REMA TIP TOP bike wheel truing stand facilitates many workshop tasks and can be used with all sizes of wheels. The "center finder" ensures immediate setting of the center position of the rim. The steel parts of the truing stand, which has an overall weight of 9 kg, are galvanized, and the hardened guide pins ensure low-wear operation. The truing stand dial indicators are fitted with special sleeve bearings.

The bike ceiling lift also enormously simplifies lifting in the workshop. The frame construction in massive rectangular-section tubing can be used with a ceiling height of up to two or three meters by moving the guide pulleys or, in conjunction with a lifting sling extension, can accommodate a ceiling height of up to four meters. Movement is by means of an electric cable winch and guide pulley system that gives a travel of up to 1000 mm with a carrying capacity of 50 kg. The mounting hooks are clad with PVC tubing to prevent damage to paintwork.

A further product highlight at this year's EUROBIKE is the bike tube no-wait repair range. It combines the repair speed of self-adhesive patches with the durability of permanent rubber vulcanization. It possesses a very special feature – there is no need to wait until the SVS vulcanization fluid dries because the inner tube patch can be fitted immediately after the coat of fluid has been applied. There is no skin contact with the SVS vulcanization fluid and the repair of the inner tube is fast and clean.

Since this is a further development of the existing range, ordering data such as the item number and packaging units remain unchanged, the new variant being branded by means of a special digital watch pictogram. The repair set is available immediately via the bike wholesale trade or purchasing associations.

# Press Release

// ONE BRAND // ONE SOURCE // ONE SYSTEM

In keeping with its focus on the workshop line, REMA TIP TOP will show its complete product range – from the mechanical fitting stand variants that hold the EUROBIKE Award up to the high-end pneumatic XL versions of these machines. The products on show will be rounded off by the Company's well-known products for tire repair, bike cleaning & care, safety reflector and outdoor repair materials.

## **Short Profile**

REMA TIP TOP has for decades offered its customers in the material processing, surface protection, automotive and service sectors solutions that are specifically matched to one another and certified.

Products, services and engineering from REMA TIP TOP for corrosion and wear protection of conveying and processing plant can reduce industrial failures and outages while optimizing operating safety and production capacities, thus increasing profitability. The Company has, moreover, made a name for itself in the provision and maintenance of conveyor belts.

As one of the biggest specialists in the world for the repair of bicycle, car, commercial vehicle and motorcycle tires up to OTR and EM models, REMA TIP TOP actively contributes to and drives change in the automobile sector through its safe, environmentally-friendly and efficient products and systems solutions

– a core capability given the need for climate protection, emission control legislation and finite oil reserves. REMA TIP TOP deems its close partnership with both the tire and automobile industry and with specialist suppliers to be decisive.

The guiding principle here is: We manage your workshop – with systems expertise and comprehensive know-how.

REMA TIP TOP means quality, service and innovative solutions in all of its business segments:

ONE BRAND – ONE SOURCE – ONE SYSTEM
